# *Methodology*

# Methodology

Nanos conducted a RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians between August 24<sup>th</sup> and 28<sup>th</sup>, 2014 as part of a Canadian omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The sample included both land- and cell-lines across Canada. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada.

Individuals randomly called using random digit dialling with a maximum of five call backs.

The margin of error for a random survey of 1,000 Canadians is  $\pm 3.1$  percentage points, 19 times out of 20.

The data presented in this research is part of a joint project by CTV News and Nanos Research.
